THE BICSI INSTALLER 1® INST1® CREDENTIAL PROCESS

Your company and employees are more marketable with the skills learned through the BICSI Cabling Installation Program. BICSI Installer 1 (INST1) candidates are tested on their ability to understand and apply a comprehensive collection of installation-specific information.
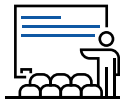

1

Decide

There is no prior ICT industry experience requirement for individuals preparing to sit the Installer 1 exam so it is perfect for those just starting out or wanting to refresh their skills.

2

Prepare

Prepare for your exam by attending the IN101: Installer 1 course which provides entry-level installers with the knowledge & basic skills needed to function safely and effectively as part of an installation team.

3

Apply

Complete the online exam application and submit for BICSI's Credentialing Department to review.

4

Test

To become a BICSI Installer 1, you are required to pass both the hands on exam which is sat on the last day of the IN101 class and the written exam which is bookable at a Pearson VUE test centre.

5

Suggested Program Advancement

If you're looking to further your career, we suggest you advance to the Installer 2, Copper and/or Installer 2, Optical Fiber credential(s) as part of the Cabling Installation program.
